Biosolids Land Application Checklist

Ohio EPA Number: 02-00103

Field Identification Number: All-4-A Field Location: Cole St at main office

_____ The field has been approved for biosolids application by OEPA.

_____ A soil sample has been taken within past the 2 years.

_____ The soil pH is 5.5 or higher.

_____ The soil phosphorous level is less than 150 parts per million (300 pounds per acre) Bray-Kurtz P1 extraction or 170 parts per million (three hundred forty pounds per acre) Mehlich 3 extraction.

_____ The metals concentrations of the biosolids to be applied are less than the Table 3 concentration limits.

_____ The biosolids to be applied meets pathogen reduction alternative 1. (The geometric mean of the fecal coliform bacteria density in seven samples is less than 2,000,000 MPN per gram of total solids.)

_____ The biosolids have been analyzed for TKN, ammonia, phosphorous, potassium, pH, % total solids, and % volatile solids.

_____ The agronomic rate calculations have been performed.

_____ The farmer has been notified of the site restrictions.

_____ The isolation distances have been marked.

_____ The signage requirements have been met.

Date Signs Posted: _____ **Date Removed:** _____

_____ The farmer has been given an information sheet on the biosolids that were applied to this site.

As each requirement listed has been fulfilled, the person responsible is to place their initials on the line beside the requirement. After all requirements listed are fulfilled, the responsible person is to sign and date below.

Re: Fulton County
Clinton Township
Beneficial Use Site Review

March 14, 2013

Mr. Dave Pike, Superintendent
Wauseon Water Reclamation Plant
230 Clinton Street
Wauseon, Ohio 43567

Dear Mr. Pike:

Ohio EPA has reviewed the request to authorize beneficial use sites for land application of biosolids in Fulton County from the City of Wauseon Water Reclamation Plant. Ohio EPA has inspected the proposed sites and our findings and recommendations are as follows:

OEPA Site #26-00074: (Eric Richer Farm ER#1, ER#2) - This 90 acre site owned and farmed by Richer Farms is located on the south side of County Road D, just west of State Route 108 in Section 35 of Clinton Township. The major soil types at the site are Glynwood loam, Haskins loam, Hoytville clay loam, Mermill loam, Nappanee loam, Rimer loamy fine sand and Seward loamy fine sand. Soil analytical results indicate an average pH value of 6.4 and a soil phosphorus value of 25 ppm (Bray Kurtz P1). This site is acceptable for the beneficial use of municipal biosolids from the City of Wauseon Water Reclamation Plant provided proper isolation distances are maintained from the house located on the north edge of the field along county Road D.

OEPA Site #26-00075: (Larry Richer Farm LR#1, LR#2, LR#3, LR#4) - This 153 acre site owned and farmed by Richer Farms is located on the south side of County Road D, just east of Township Road 15 in Section 35 of Clinton Township. The major soil types at the site are Blount loam, Haskins loam, Hoytville clay loam, Mermill loam, Nappanee loam, Rimer loamy fine sand and Seward loamy fine sand. Soil analytical results indicate an average pH value of 6.6 and a soil phosphorus value of 48 ppm (Bray Kurtz P1). This site is acceptable for the beneficial use of municipal biosolids from the City of Wauseon Water Reclamation Plant provided proper isolation distances are maintained from the two houses located on the north edge of the field along county Road D and the house located near the southwest corner of the site.

This site has a soil phosphorus value greater than 40 parts per million Bray Kurtz P1 extraction. Please be aware that, in accordance with Ohio Administrative Code (OAC) 3745-40-08(A)(2)(b), after July 1, 2013, the agronomic rate at any beneficial use site shall be the most limiting factor derived from the following for the purpose of protecting waters of the state:

"For soils with soil phosphorus test results greater than forty parts per million Bray-Kurtz P1 extraction or forty-five parts per million Mehlich III extraction and less than or equal to one hundred parts per million Bray-Kurtz P1 extraction or one hundred fifteen parts per million Mehlich III extraction:
(a) The nitrogen agronomic rate; or
(b) A multi-year phosphate agronomic rate

Ohio Environmental Protection Agency

The site is not authorized if you don’t have copies of these items!

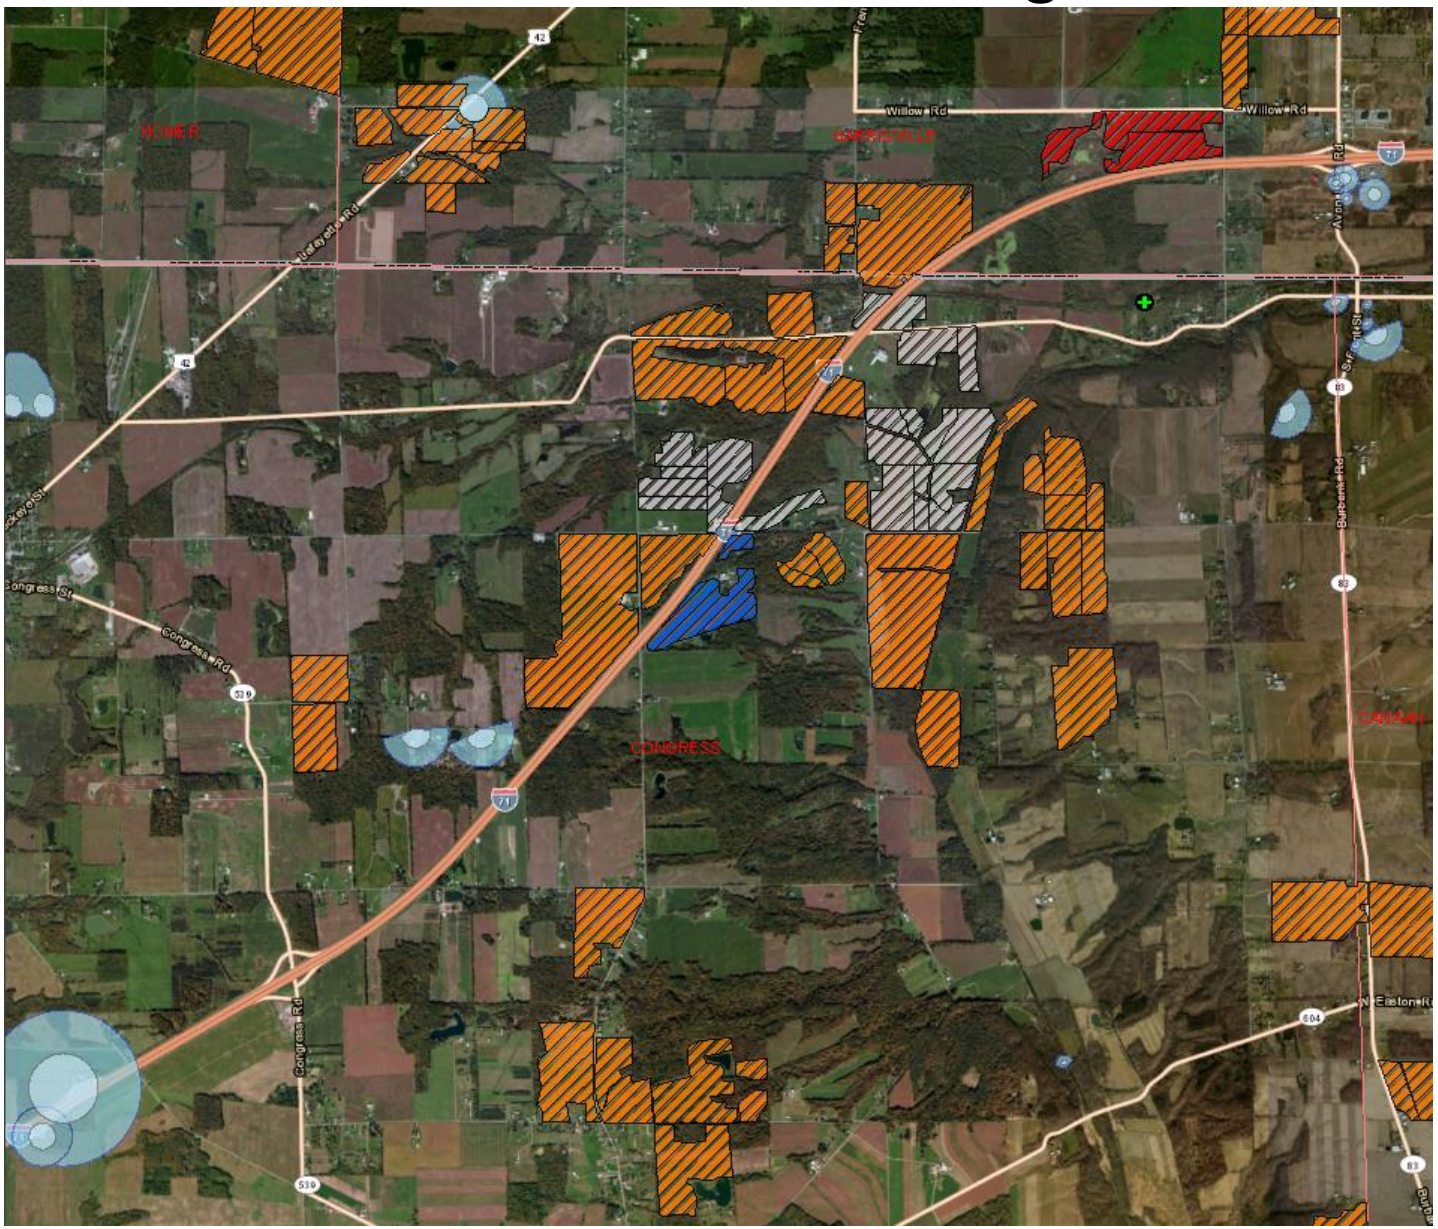
Ohio Environmental Protection Agency

If your site is not authorized…

- New Site Authorizations
  - Submit completed beneficial use site authorization requests as soon as you know a new site needs to be authorized.
  - Sites are reviewed in the order they are received.
  - It takes Ohio EPA a minimum of 30 days to review a site request and issue a site authorization letter.

Ohio Environmental Protection Agency

Ohio EPA Site Tracking



Are your soil samples current?

- Soil samples must be less than 3 years old.

- Soil pH –
  - Above 5.5

- Soil Phosphorus
  - Bray- Kurtz – P1
  - Mehlich 3

Screening

- By July 1, 2015, any treatment plant who wishes to beneficially use biosolids must have a means of screening out manufactured inerts from the influent sewage and septage **or** sewage sludge.

- This may be accomplished through fine screening (5/8" max aperture, but the finer the better) or other means approved by the Director.

Ohio Environmental Protection Agency

Pathogen Reduction	Vector Attraction Reduction
P1 – Geometric Mean of 7 Fecal Coliform Samples	VAR1 – 38% Volatile Solids Reduction
P2 – Aerobic Digestion	VAR2 – Bench Scale Anaerobic Digestion

Ohio Environmental Protection Agency

Agronomic Rates

"Agronomic rate" means a rate of application of nutrients from any source to the land or an amount of nutrients removed by crop based on:

(1) Nutrient content of the biosolids to be applied;
(2) Nutrient needs of the current or planned crops; and
(3) Nutrient holding capacity of the soil.

Ohio Environmental Protection Agency

Have you calculated the Agronomic Rate?

- Beginning July 2013, beneficial users have to evaluate phosphorus loadings as well as nitrogen loadings for beneficial use.

- The limits on application of phosphorus are based on the phosphorus soil tests for the beneficial use site.

Ohio Environmental Protection Agency

Re: Fulton County
Clinton Township
Beneficial Use Site Review

March 14, 2013

Mr. Dave Pike, Superintendent
Wauseon Water Reclamation Plant
230 Clinton Street
Wauseon, Ohio 43567

Dear Mr. Pike:

Ohio EPA has reviewed the request to authorize beneficial use sites for land application of biosolids in Fulton County from the City of Wauseon Water Reclamation Plant. Ohio EPA has inspected the proposed sites and our findings and recommendations are as follows:

OEPA Site #26-00074: (Eric Richer Farm ER#1, ER#2) - This 90 acre site owned and farmed by Richer Farms is located on the south side of County Road D, just west of State Route 108 in Section 35 of Clinton Township. The major soil types at the site are Glynwood loam, Haskins loam, Hoytville clay loam, Mermill loam, Nappanee loam, Rimer loamy fine sand and Seward loamy fine sand. Soil analytical results indicate an average pH value of 6.4 and a soil phosphorus value of 25 ppm (Bray Kurtz P1). This site is acceptable for the beneficial use of municipal biosolids from the City of Wauseon Water Reclamation Plant provided proper isolation distances are maintained from the house located on the north edge of the field along county Road D.

OEPA Site #26-00075: (Larry Richer Farm LR#1, LR#2, LR#3, LR#4) - This 153 acre site owned and farmed by Richer Farms is located on the south side of County Road D, just east of Township Road 15 in Section 35 of Clinton Township. The major soil types at the site are Blount loam, Haskins loam, Hoytville clay loam, Mermill loam, Nappanee loam, Rimer loamy fine sand and Seward loamy fine sand. Soil analytical results indicate an average pH value of 6.6 and a soil phosphorus value of 48 ppm (Bray Kurtz P1). This site is acceptable for the beneficial use of municipal biosolids from the City of Wauseon Water Reclamation Plant provided proper isolation distances are maintained from the two houses located on the north edge of the field along county Road D and the house located near the southwest corner of the site.

This site has a soil phosphorus value greater than 40 parts per million Bray Kurtz P1 extraction. Please be aware that, in accordance with Ohio Administrative Code (OAC) 3745-40-08(A)(2)(b), after July 1, 2013, the agronomic rate at any beneficial use site shall be the most limiting factor derived from the following for the purpose of protecting waters of the state:

"For soils with soil phosphorus test results greater than forty parts per million Bray-Kurtz P1 extraction or forty-five parts per million Mehlich III extraction and less than or equal to one hundred parts per million Bray-Kurtz P1 extraction or one hundred fifteen parts per million Mehlich III extraction:
(a) The nitrogen agronomic rate; or
(b) A multi-year phosphate agronomic rate

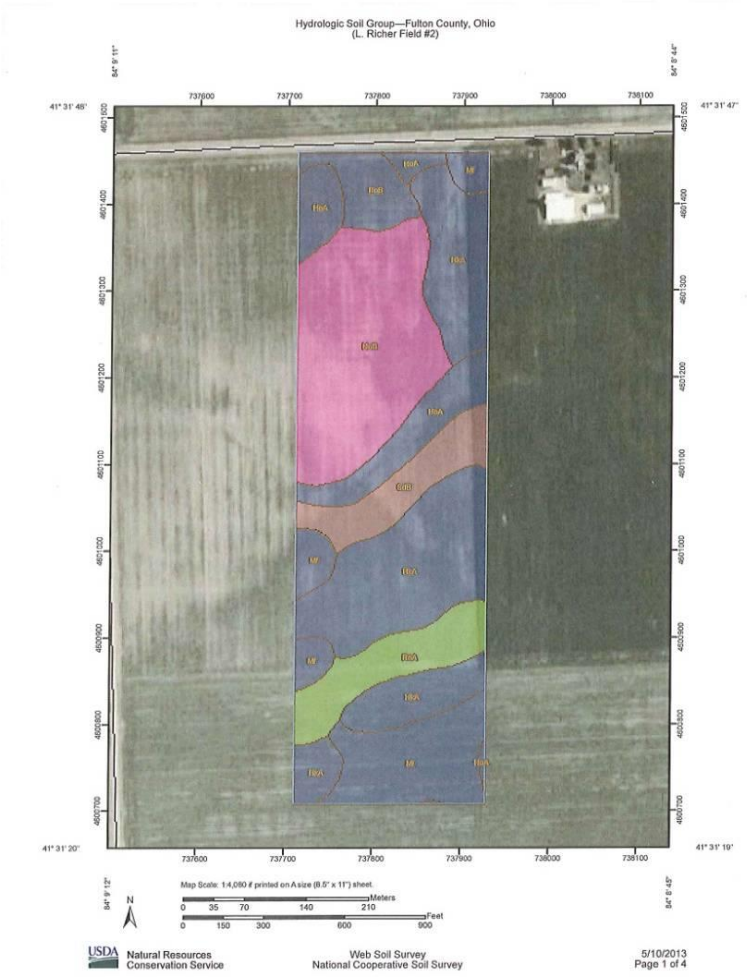
www.alloway.com

- Enter analytical results for the nutrients in the biosolids.
- Answer question - “will immediate incorporation or injection be performed?”

Ohio Environmental Protection Agency

Step 3 – Beneficial Use Site Info



- Enter Soil Phosphorus Results & Analysis Method.
- Select Hydrologic Soil Group from the drop down box.
- Find using the USDA NRCS Web Soil Survey.

Ohio Environmental Protection Agency

Step 4 – Enter Crop Information

- Crops that will be grown (1-5 year rotation)
- Crop Nitrogen Requirement
- Account for residual available Nitrogen
  Refer to: *Tri-State Fertilizer Recommendations*
  ohioline.osu.edu/e2567/index.html
- Account for Non-Biosolids Fertilizer Application Rates

Ohio Environmental Protection Agency

Residual Nitrogen Values

Previous Crop	Nitrogen Credits (lbs/acre)
Corn, small grains	0
Soybeans	30
Grass sod	40
Established forage legume	=40+20*(plants/ft^2)
Annual legume cover crop	30

Ohio Environmental Protection Agency

Crop Information

- First year crop is corn-grain, expected yield of 200 bushels/acre.
- Second year crop is soybeans, expected yield of 60 bushels/acre.
- Third year crop is wheat, expected yield of 90 bushels/acre.

Ohio Environmental Protection Agency

Which Rate to Use?

The soil phosphorus value is 48 ppm so we must use the most limiting of:

- Multi-year phosphate rate = 2.3 dry tons/acre
- Nitrogen Agronomic Rate = 7.0 dry tons/acre

Use Multi-year phosphate agronomic rate!

Ohio Environmental Protection Agency

Agronomic Rate Record Keeping

- Agronomic rate description
  - Must have documentation showing that equipment utilized for biosolids spreading has been calibrated.
  - Example would be calculating volume of spreader, pull at certain speed/rpm/gear until empty, measure area covered.

Ohio Environmental Protection Agency

Signage Requirements

- Signage
  - Signs must be posted at all Class B biosolids beneficial use sites at least one week prior to delivery of Class B biosolids to the site.
  - Within 25ft. of field entrance from the public road
  - “Notice: Ohio EPA Authorized Class B Biosolids Beneficial Use Site. Trespassing Prohibited.”

Ohio Environmental Protection Agency

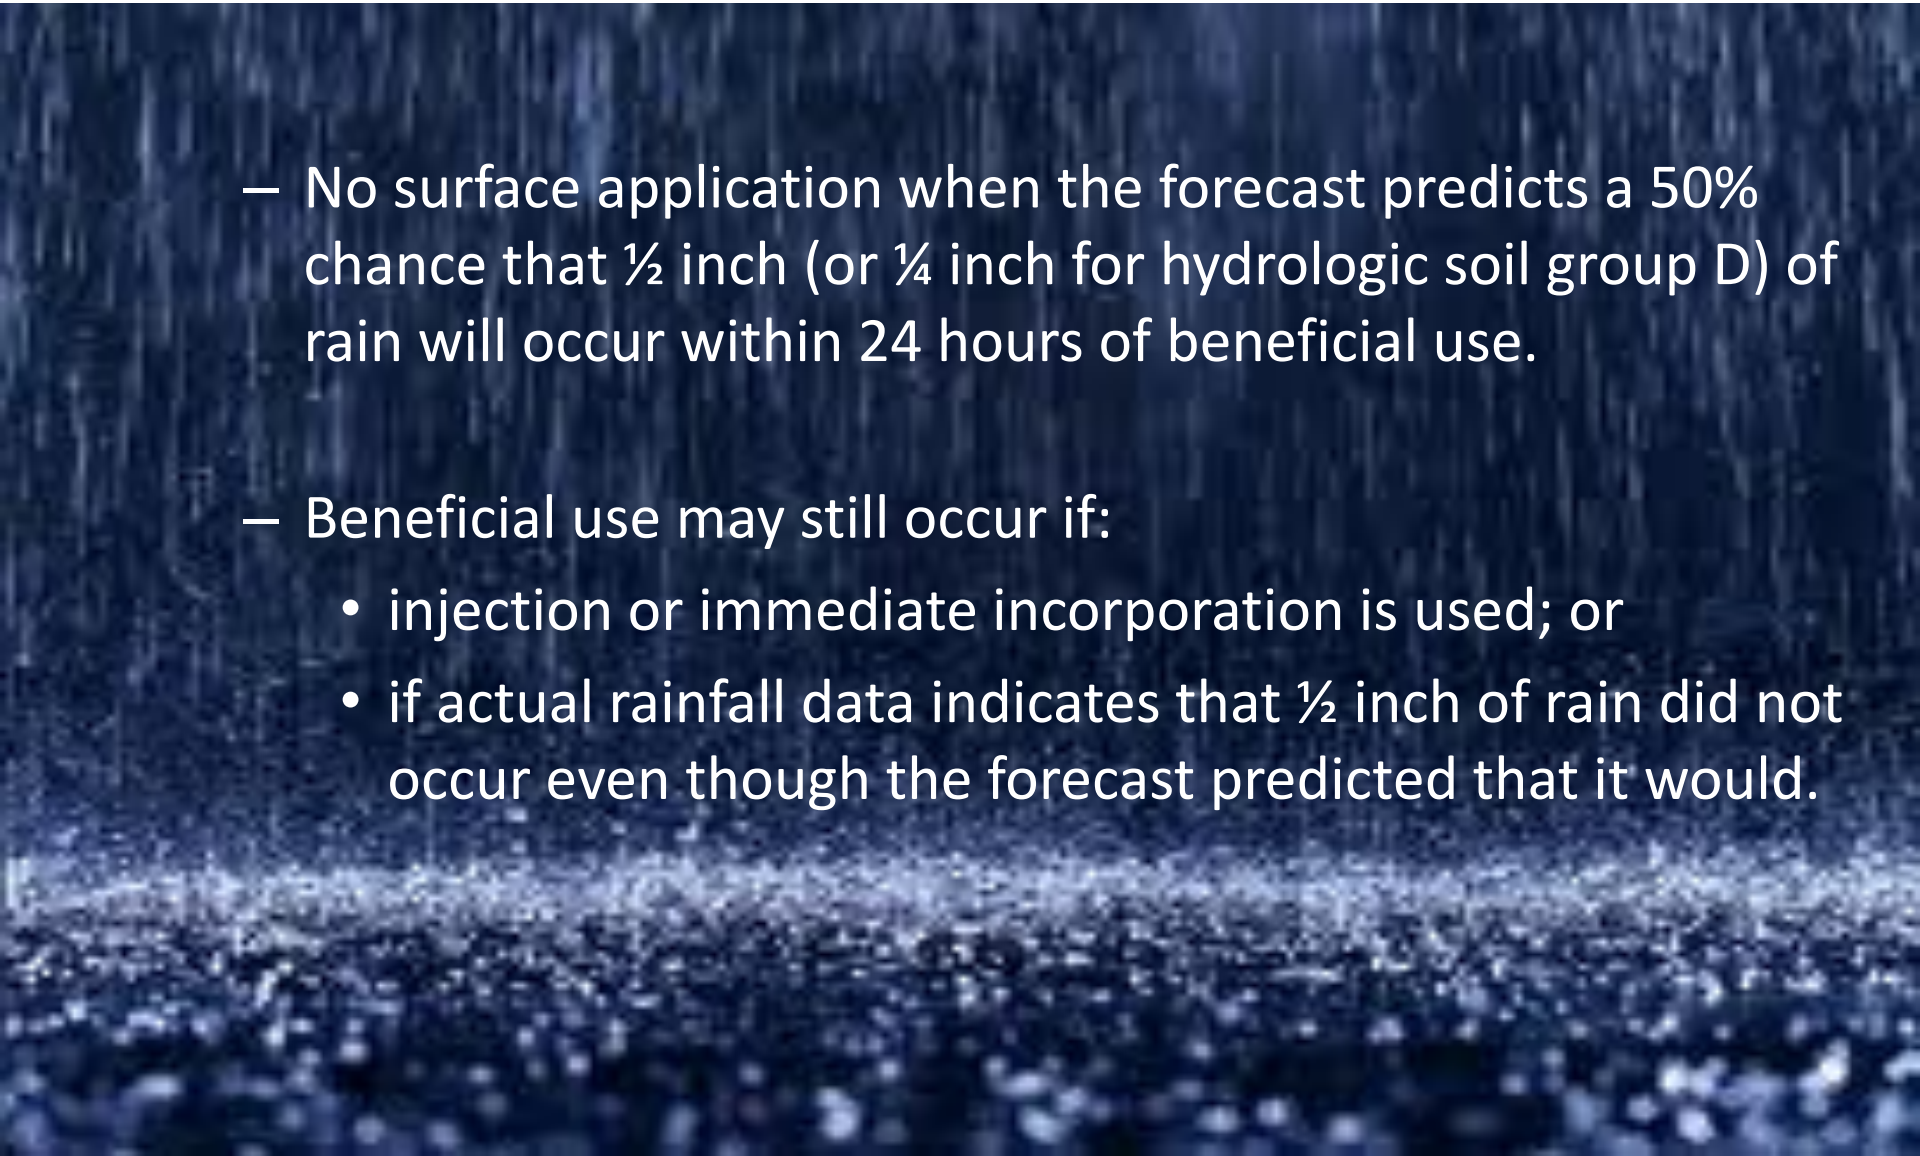
Ohio Environmental Protection Agency

Precipitation Restrictions for Class B Biosolids



- No surface application when the forecast predicts a 50% chance that ½ inch (or ¼ inch for hydrologic soil group D) of rain will occur within 24 hours of beneficial use.

- Beneficial use may still occur if:
  - injection or immediate incorporation is used; or
  - if actual rainfall data indicates that ½ inch of rain did not occur even though the forecast predicted that it would.

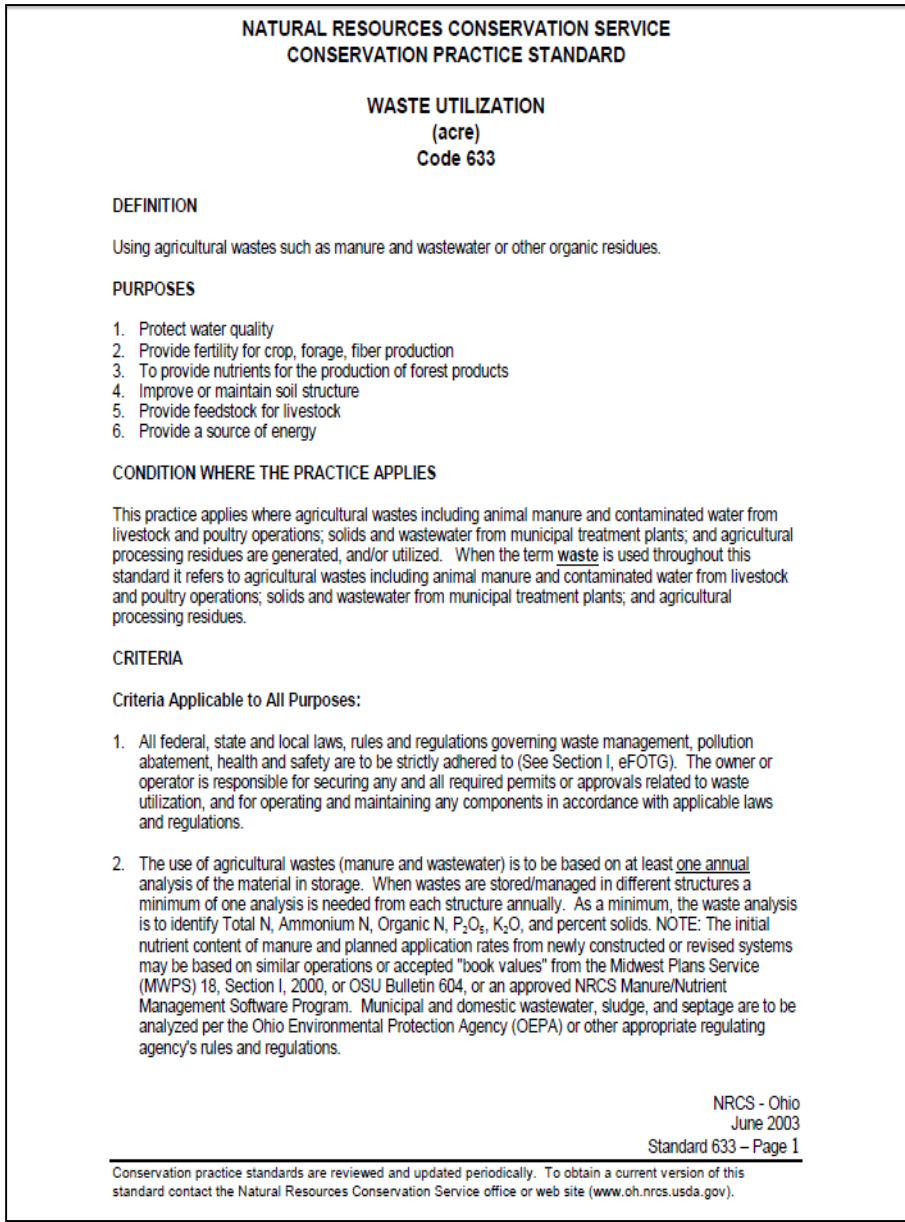
Frozen Snow Covered Ground

- Surface application of bulk biosolids to land from December 15 through March 1 is prohibited, unless injected or incorporated within 24 hours of application.

- Surface application of bulk biosolids to frozen and snow covered ground during the rest of the year will have to be in accordance with NRCS Waste Utilization Code 633.
  - Greater than 90% ground cover and not covered with snow/ice;
  - <5,000 gallons/acre if liquid;
  - <20 contiguous acres;
  - >200 feet from “waters of the state”;
  - <6% slope;
  - Visual outlet (drainage and tile) monitoring; and
  - <26 mg/L ammonia nitrogen at discharge.



NATURAL RESOURCES CONSERVATION SERVICE
CONSERVATION PRACTICE STANDARD

WASTE UTILIZATION
(acre)
Code 633

DEFINITION

Using agricultural wastes such as manure and wastewater or other organic residues.

PURPOSES

1. Protect water quality
2. Provide fertility for crop, forage, fiber production
3. To provide nutrients for the production of forest products
4. Improve or maintain soil structure
5. Provide feedstock for livestock
6. Provide a source of energy

CONDITION WHERE THE PRACTICE APPLIES

This practice applies where agricultural wastes including animal manure and contaminated water from livestock and poultry operations; solids and wastewater from municipal treatment plants; and agricultural processing residues are generated, and/or utilized. When the term waste is used throughout this standard it refers to agricultural wastes including animal manure and contaminated water from livestock and poultry operations; solids and wastewater from municipal treatment plants; and agricultural processing residues.

CRITERIA

Criteria Applicable to All Purposes:

1. All federal, state and local laws, rules and regulations governing waste management, pollution abatement, health and safety are to be strictly adhered to (See Section I, eFOTG). The owner or operator is responsible for securing any and all required permits or approvals related to waste utilization, and for operating and maintaining any components in accordance with applicable laws and regulations.

2. The use of agricultural wastes (manure and wastewater) is to be based on at least one annual analysis of the material in storage. When wastes are stored/managed in different structures a minimum of one analysis is needed from each structure annually. As a minimum, the waste analysis is to identify Total N, Ammonium N, Organic N, P_2O_5, K_2O, and percent solids. NOTE: The initial nutrient content of manure and planned application rates from newly constructed or revised systems may be based on similar operations or accepted "book values" from the Midwest Plans Service (MWPS) 18, Section I, 2000, or OSU Bulletin 604, or an approved NRCS Manure/Nutrient Management Software Program. Municipal and domestic wastewater, sludge, and septage are to be analyzed per the Ohio Environmental Protection Agency (OEPA) or other appropriate regulating agency's rules and regulations.

Conservation practice standards are reviewed and updated periodically. To obtain a current version of this standard contact the Natural Resources Conservation Service office or web site (www.oh.nrcs.usda.gov).

Field Tile Monitoring

- If liquid biosolids are to be beneficially used, tile outlet monitoring shall occur before, during and after beneficial use.
- Rates are limited to ½ inch or 13,000 gallons/acre/beneficial use event.
- Tools shall be used to disrupt preferential flow pathways during beneficial use or all tile outlets shall be plugged.
- If injected, only inject deep enough to cover biosolids with soil.
- Have tools available onsite to plug tiles, if necessary!

Ohio Environmental Protection Agency

Now Lets Land Apply!

Ohio Environmental Protection Agency

Record Keeping

- Notice and Necessary Information
  - The biosolids generator is required to provide the land applier a copy of metal testing results, PR and VAR results.
  - The land applier is a required to provide the farm operator and land owner information a copy of the application rate and nutrients in the biosolids that were beneficially used.

NPDES Permit #6PA00000

The material you are receiving is or contains biosolids that have been treated to meet the requirements in Chapter 3745-40 of the Ohio Administrative Code.

Most recent analysis of biosolids:

TKN =	35,000 mg/kg	Hg=	<1 mg/kg	As=	24 mg/kg	Cu=	500 mg/kg
NH_4=	7,000 mg/kg	Mb=	15 mg/kg	Cd=	<1 mg/kg	Pb=	75 mg/kg
Total P=	18,000 mg/kg	Zn=	1,300 mg/kg	Se=	4 mg/kg	Ni=	30 mg/kg
Total K=	3,000 mg/kg						

Pathogen Reduction Alternative P-1, Geometric Mean of Seven Fecal Colifrom Samples, has been met.
Vector Attraction Reduction Option VAR-1, 38% Volatile Solids Reduction, has been met.

The biosolids you are receiving are Class B, and shall be further treated, stored, transferred, disposed of, or beneficially used in accordance with Chapter 3745-40 of the Ohio Administrative Code, which may be found here:

Lima, Ohio 45804

Dear Mr. Metzger

On May 7,8,9,10, 2006, biosolids from Shawnee II and Tank 4 at Am. Bath Wastewater Treatment Plant, Ohio EPA Permit 2PK00002*HD and 2PH00007*HD, were applied to the field located on Cole St. next to our driveway. Biosolids are a by-product of wastewater treatment.

Analysis of the biosolids showed the following concentrations:

	Shawnee	Am. Bath Tank 4
Total Kjeldahl Nitrogen:	81,900 mg/kg	60,900 mg/kg
Ammonia Nitrogen:	7,800 mg/kg	11,100 mg/kg
Total Phosphorous:	31,000 mg/kg	29,400 mg/kg
Total Potassium:	7,030 mg/kg	8,240 mg/kg

Application Rates applied to the site:

Available Nitrogen:	25.4 lbs/acre
Phosphorous:	88.0 lbs/acre
Potassium:	26.6 lbs/acre

The above information is supplied as a requirement of the Ohio EPA, Division of Surface Water, at 1-877-644-2001.

If you have any questions, please contact me at American-Bath Wastewater Treatment Plant, 3226 N. Cole St., Lima, Ohio 45801, or by phone at (419) 225-8048 Monday thru Friday between the hours of 7:30 am and 3:30 pm.

Sincerely,

Bill Griffin
Chief Sludge Operator
Allen County Sanitary Engineers
